

## WATER CONSERVATION TIPS

Since the installation of water meters we were trending toward reduced water use, however with the recent drought there has been an uptick in usage. Current drought conditions bring attention the importance to conserve water whenever and wherever possible. Here are a few suggestions.

### Conserving water inside your home:

- Fix leaking faucets, pipes, toilets, etc.
- Replace old fixtures; install water-saving devices in faucets, toilets and appliances.
- Wash only full loads of laundry.
- Take shorter showers.
- Turn off water while shaving and brushing teeth.
- Run the dishwasher only when full.

### Conserving water outdoors:

- Reduce your lawn area with drought tolerant plants
- Water the lawn and garden in the early morning or evening.
- Use mulch around plants and shrubs.
- Repair leaks in faucets and hoses.
- Use water-saving nozzles.
- Use water from a bucket to wash your car: Save the hose for rinsing.
- Adjust the timer on automatic sprinklers according to seasonal water demands and weather conditions.
- Make sure sprinklers are adjusted to water only the landscape and not sidewalks.

### Contact Us

For more information about this report or any questions related to drinking water issues please call Carol Scianna, Environmental Service Manager, Public Works, at 794-6715 or via email [carol.scianna@cityofwinters.org](mailto:carol.scianna@cityofwinters.org).

## GENERAL DRINKING WATER

The source of drinking water (tap and bottled) include lakes, rivers, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves minerals and, in some cases radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial Contaminants* such as viruses and bacteria that may come from sewage treatment plants, septic systems, agriculture livestock operations and wildlife.
- *Inorganic Contaminants* such as salts and metals that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil & gas production, mining or farming.
- *Pesticides and Herbicides* may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.
- *Organic Chemical Contaminants* including synthetic and volatile organic chemical byproducts of industrial processes and petroleum production, gas stations, urban stormwater runoff and septic systems.
- *Radioactive Contaminants* which can be naturally-occurring or the result of oil & gas production and mining activities.

In order to ensure that tap water is safe to drink, USEPA and the California Department of Health (CDPH) prescribe regulations that limit the amount of certain contaminants in water provided by the public water systems. CDPH regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

All drinking water (tap and bottled) may reasonably be expected to contain at least a small amount of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at (800) 426-4791

## 2014 WATER QUALITY REPORT

The City of Winters, population 6979, is served by 2041 water connections. Over 394 million gallons of water were supplied in 2014. The average per day use delivered per residential connection was 324 gallons and 1156 gallons for non-residential.

The City pumps drinking water from five wells into a single system. The wells draw from 2 aquifers at depths ranging from 158 feet to 630 feet. Winters has two wells with auxiliary power supplies, that are capable of supplying the entire system if necessary. The system operates at a pressure of 55 to 60 psi (pounds per square inch). The wells are able to respond independently and jointly to address pressure changes.

The goal of the City of Winters Public Works Department is to provide residents and all water users within the city with a safe and dependable drinking water supply. To this end, members of the department attend workshops and trainings which enhance their knowledge of our city's water system. Staff has taken the steps necessary to become Certified Water Distribution Operators, at levels ranging from D1 through D3.

City water is tested regularly for various minerals, chemicals and constituents in accordance with state and federal regulations. Last year, as in years past, your tap water met EPA and state drinking water health standards, with the exception of Hexavalent Chromium. Our levels remain the same as in past years, but the CDPH recently lowered the MCL from 50ppb to 10ppb

This report presents results from water sampling conducted in the past year and includes state and fed-

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

**City of Winters Water Sampling Analysis Results**  
Sampling Dates: Quarterly 2014~Title 22 June 12,2014

**PRIMARY DRINKING WATER STANDARD**

(Regulated in order to protect against possible adverse health effects.)

SUBSTANCE (units)	YEAR SAMPLED	MCL	PHG	AVERAGE	RANGE LOW-HIGH	TYPICAL SOURCE
Barium ( ppm)	2014	1	2	.07	.0-.15	Discharges of oil drilling wastes and from metal refineries; erosion of natural deposits
Chromium –Total (ppb)	2014	50	100	17	16-18	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits
Hexavalent Chromium –(ppb)	2014	10	2	15.9	4-22	Erosion of natural deposits
Nitrate (ppm)	2014	45	45	16.4	3-25	Runoff and leaching from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits (See "Nitrate Info" box for health information)
Fluoride (ppm)	2014	2	1	0.1	0-0.2	Erosion of natural deposits

**Tap water samples were collected for lead and copper analysis from 20 homes within service area-August 2014**

SUBSTANCE (UNITS)	ACTION LEVEL	PHG	AMOUNT DETECTED	AMOUNT DETECTED (90th %ile)	HOMES ABOVE ACTION LEVEL	TYPICAL SOURCE
Copper (ppm)	1.3	0.3	0.25	0.13	0	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Lead (ppm)	15	2	ND	ND	0	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers, erosion of natural deposits.

**UNREGULATED AND OTHER SUBSTANCES**

SUBSTANCE (UNITS)	YEAR SAMPLED	AL	Average	RANGE LOW-HIGH
Calcium (ppm)	2014	N/A	49	31-67
Hardness (ppm)	2014	N/A	265	160-370
Magnesium (ppm)	2014	N/A	34.5	20-49
pH (units)	2014	N/A	8.20	8.20
Sodium (ppm)	2014	NA	23	21-25
Total (ppm) Alkalinity	2014	342	230	150-310

**NITRATE INFO**

Nitrate in drinking water at levels above 45 ppm is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in serious illness; symptoms include shortness of breathe and blueness of the skin. Nitrate levels above 45 mg/L may also affect the ability of the blood to carry oxygen in other individual, such as pregnant women and those with specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advise from your health care provider. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity.

**SPECIAL HEALTH INFORMATION**

Some people may be more vulnerable than others to contaminants in drinking water. Immuno-compromised persons such as persons undergoing cancer chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. The USEPA/CDC (Centers for Disease Control) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available for the Safe Drinking Water Hotline.

**SECONDARY DRINKING WATER STANDARD**  
(Regulated in order to protect against the odor, taste and appearance of drinking water.)

SUB-STANCE (units)	YEAR SAMPLED	MCL	AVERAGE	RANGE LOW-HIGH	TYPICAL SOURCE
Chloride (ppm)	2014	500	22	21-23	Runoff/leaching from natural deposits; seawater influence
Iron (ppm)	2014	300	ND	ND	Leaching from natural deposit; industrial discharges
Sulfate (ppm)	2014	500	36	22-50	Runoff/Leaching from natural deposits
Odor-Threshold (units)	2014	3	ND	ND	Leaching from natural deposits
Specific Conductance us/cm)	2014	1600	585	430-740	Substances that form ions when in water; seawater influence
Total Dissolved Solids [TDS] (ppm)	2014	1000	355	250-460	Runoff/Leaching from natural deposits
Turbidity (NTU)	2014	5	.13	.10-.15	Soil Runoff

**COLIFORM BACTERIA SAMPLING RESULTS**

NUMBER OF SAMPLES	POSITIVE SAMPLES	MCL	PHG	VIOLATIONS	TYPICAL SOURCE
106	0	2 per month	0	0	Naturally present in the environment; human and animal waste

**DEFINITIONS**

- AL** (Action Level) Level above which water treatment or other regulatory requirements must be enacted by the water system operator.
- MCL** (Maximum Contaminant Level) The highest level of a contaminate allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCGLs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste and appearance of drinking water.
- MRDL** (Maximum Residual Disinfectant Level) The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of disinfectant is necessary for control of microbial contaminants.
- PHG** (Public Health Goal) The level below which there is no known or expected health risk. Set by the CA EPA/ US EPA.
- NA** Not Applicable
- ND** Not detectable at testing limit
- NTU** (Nephelometric Turbidity Units) The standard unit for turbidity measurements
- ppb** parts per billion or micrograms per liter (ug/l)
- ppm** parts per million or milligrams per liter (mg/l)
- pCi/L** Picocuries per liter (a measure of radiation)
- Us/cm** (micromhos per centimeter) A measure of electrical conductance.
